### LT-836 Universal Half-Shaft Removal Tool (UHRT) - 2 pieces

The LT-836 Universal Half-Shaft Tool (UHRT) is a must have tool for knocking out half-shafts from all CV axles. There are two UHRT sockets for removing inner half-shafts on front wheel drive cars. The first socket (LT-836-900) is for all applications except Toyota Camry. The second socket (LT-836-940) is for Toyota Camrys. Many front wheel drive vehicles have a half-shaft that is difficult to remove. This is due to the limited access space needed to pry the inner CV joint loose from the transaxle. Once the mechanic removes the easy outside axle, the UHRT effortlessly taps out the impossible knuckle-busting inside half-shaft axle.

Shaped like a pair of pliers with spring torque action, the Funnel Lok™ features four stabilizing prongs that can be inserted into any container or tank opening from 1 ¼" to 2 ¼" in size. Once the prongs are inside, the user simply releases the tool. This creates a steady base for the funnel to be held securely in place by the adjustable rings. Is an indispensable tool for the home, professional garage or factory. Made of durable ABS material. Allows the air to vent, which eliminates the risk of blow back. Users can also more easily monitor the rising fluid level inside the container or tank. It not only prevents spills of potentially hazardous chemicals, but its hands-free design allows containers to fully drain. Since the funnel is firmly held in place by the Funnel Lok™, the container can rest in the funnel hands-free until the last drop. With both hands free, consumers can also use two hands to pour bigger or larger, economy-size containers--saving money and packaging materials in the process.
